

## **PRODUCT**

**Compost Substrate**

## **CHARACTERISTICS**

The compost produced by Derivados Vínicos S.A. can be used as a substrate for growing potted plants.

### **COMPOSITION**

***Compost – Substrate*** is a product obtained from the process of aerobic composting of viticultural organic waste, under controlled conditions of temperature and humidity.

During the production process of ***Compost - Substrate***, the physicochemical monitoring is carried out in order to guarantee the quality of the final product.

## **ADVANTAGES OF USING COMPOST – SUBSTRATE**

The use of compost as a substrate component provides:

- Support and anchor to the plant.
- Good ventilation and porosity.
- High water retention capacity
- Good drainage
- High content of organic matter and nutrients available for long periods of time.
- It stimulates the activity of microorganisms favoring soil fertility.

## **DOSAGE**

Research has been carried out through a Technical Assistance Agreement with INTA - EEA Mendoza using Compost - Substrate in the production of thoughts and primroses.

## **STORAGE AND PACKAGING**

Currently the sale is in bulk.
